Microsemi makes no warranty, representation, or guarantee regarding the information contained herein or the suitability of its products and services for any particular purpose, nor does Microsemi assume any liability whatsoever arising out of the application or use of any product or circuit. The products sold hereunder and any other products sold by Microsemi have been subject to limited testing and should not be used in conjunction with mission-critical equipment or applications. Any performance specifications are believed to be reliable but are not verified, and Buyer must conduct and complete all performance and other testing of the products, alone and together with, or installed in, any end-products. Buyer shall not rely on any data and performance specifications or parameters provided by Microsemi. It is the Buyer's responsibility to independently determine suitability of any products and to test and verify the same. The information provided by Microsemi hereunder is provided "as is, where is" and with all faults, and the entire risk associated with such information is entirely with the Buyer. Microsemi does not grant, explicitly or implicitly, to any party any patent rights, licenses, or any other IP rights, whether with regard to such information itself or anything described by such information. Information provided in this document is proprietary to Microsemi, and Microsemi reserves the right to make any changes to the information in this document or to any products and services at any time without notice.

About Microsemi

Microsemi Corporation (Nasdaq: MSCC) offers a comprehensive portfolio of semiconductor and system solutions for aerospace & defense, communications, data center and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs and ASICs; power management products; timing and synchronization devices and precise time solutions, setting the world's standard for time; voice processing devices; RF solutions; discrete components; enterprise storage and communication solutions, security technologies and scalable anti-tamper products; Ethernet solutions; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, Calif., and has approximately 4,800 employees globally. Learn more at www.microsemi.com.

1 Revision History

The revision history describes the changes that were implemented in the document. The changes are listed by revision, starting with the most current publication.

1.1 Revision 4.0

Updated changes related to CoreTSE_AHB v3.1.

1.2 Revision 3.0

Updated changes related to CoreTSE_AHB v3.0.

1.3 Revision 2.0

Updated changes related to CoreTSE_AHB v2.1.

1.4 Revision 1.0

Revision 1.0 was the first publication of this document. Created for CoreTSE_AHB v2.0.

Contents

1	Revision History	3
1.1	Revision 4.0	3
1.2	Revision 3.0	3

2.12	Known Limitations and Workarounds	7

2 CoreTSE_AHB v3.1 Release Notes

2.1 Overview

These release notes accompany the production release of CoreTSE_AHB v3.1. This document provides details about the features, enhancements, system requirements, supported families, implementations, and known issues and workarounds.

2.2 Features

CoreTSE_AHB has the following features:

- 10/100/1000 Mbps operation
- Full-duplex support for 10/100/1000 Mbps
- Half-duplex support for 10/100 Mbps
- Standard G/MII interface
- MDIO management interface for PHY register access
- Advanced high-performance bus (AHB) System interface
- Wake on LAN (WoL) with Magic Packet Detection
- Frame Statistics Counters
- Destination Address Based Frame Filtering
- Ten-bit interface (TBI) for 1000Base-T or 1000Base-X support

2.3 Interfaces

AHB master direct memory access (DMA) and AHB slave register interfaces.

2.4 Delivery Types

CoreTSE_AHB requires an obfuscated register transfer level (RTL) license to be used and instantiated. Complete obfuscated RTL source code is provided for the core.

2.5 Supported Families

- PolarFire
- IGLOO®2
- SmartFusion®2

2.6 Supported Tool Flows

- CoreTSE_AHB v3.1 requires Libero® System-on-Chip (SoC) software v11.7.3 and later releases.
- Microsemi® SoC Products Group Libero software v11.7.3 can be used with CoreTSE_AHB.

2.7 Installation Instructions

The CoreTSE_AHB CPZ file must be installed into Libero software. This is done automatically through the Catalog update function in Libero, or the CPZ file can be manually added using the **Add Core** catalog feature. Once the CPZ file is installed in Libero, the core can be configured, generated, and instantiated within SmartDesign for inclusion in the Libero project.

Refer to the [Libero SoC Online Help](#) for further instructions on core installation, licensing, and general use.

2.8 Documentation

This release contains a copy of the *CoreTSE_AHB Handbook*. The handbook, describes the core functionality and gives step-by-step instructions on how to simulate, synthesize, and place-and-route this core, and also implementation suggestions. Refer to the [Libero SoC Online Help](#) for instructions on obtaining IP documentation.

For updates and additional information about the software, devices, and hardware, visit the Intellectual Property pages on the Microsemi SoC Products Group website: visit:

<http://www.microsemi.com/products/fpga-soc/design-resources/ip-cores>.

2.9 Supported Test Environments

- Verilog user testbench

2.10 Resolved History

Table 1 lists the release history for CoreTSE_AHB .

Table 1 • Release History

Version	Date	Changes
3.1	February 2017	Added RX_SLIP functionality for PolarFire Family.
3.0	February 2016	Updated for single 125 MHz TBI RX CLK.
2.1	March 2015	1000Base-X with TBI interface support tested.
2.0	August 2014	Initial release supports windows and Linux.

2.10.1 Resolved Issues in the v3.1 Release

Table 2 • Resolved Issues in the v3.1 Release

SAR Number	Changes
79751	Typo in HB utilization table content.
83041	The default value of MAC-FIFO Configuration Register 5 in handbook is mismatched with actual default value.
77385	Add RX_SLIP output port and remove the barrel shift word aligner for PolarFire.

2.10.2 Resolved Issues in the v3.0 Release

Table 3 • Resolved Issues in the v3.0 Release

SAR Number	Changes
75239	Support for a single 125MHz TBI receive clock (PMA_RX_CLK).
75238	To add support for PolarFire.

2.10.3 Resolved Issues in the v2.1 Release

Table 4 • Resolved Issues in the v2.1 Release

SAR Number	Changes
62446, 63058	IGLOO2 support added.
63066	Added SYNC and ANX_STATE debug ports.
62539	Added SIGNAL_DETECT port.
66092	Resolved M-SGMII Link-Up Stability Performance Issue.

2.11 Discontinued Features and Devices

62.5MHz PMA clocks are replaced with single 125MHz PMA clock.

2.12 Known Limitations and Workarounds

There are no known limitations and workarounds for CoreTSE_AHB v3.1.
